

CHAS² Amplifier & Power Supplies Modules

Product Description

At the heart of the CHAS² Headend Amplifier System is the **CHAS² Headend Amplifier Module**.

The amplifiers feature separate RF and DC compartments for maximum EMI shielding, as well as large vertical fins that dissipate heat efficiently, eliminating the need for cooling fans.

All amplifiers are 1 GHz and have four (4) ports: signal input, signal output, input test and output test point.* They feature continuous slope and gain controls and allow adjustments without service interruption. All modules are hot swappable and available in a variety of gains and configurations allowing System Engineers to design solutions to fit any headend or hubsite.

All amplifiers have a built-in signal level alarm and threshold levels can easily be set by a continuous control located on the face of the module. In the case RF levels deviate from set levels, a flashing LED is activated. The additional CHAS² SNMP option allows remote monitoring of the amplifier including temperature, voltage, current and RF level. See CHAS² Status Monitoring for more.

The CHAS² Chassis accepts any CHAS² AC Mains or -48 VDC Power Supply in any slot. A single power supply will power a full chassis. Adding a second AC or DC power supply will allow for power redundancy. The CHAS² Chassis may also be powered directly from any +24 VDC power source. **

* Narrowcast amplifier models have an inject port in place of the input test point.

** Any two power sources function automatically in redundant mode

Applications

- RF Amplifier Modules for CHAS² Headend Amplifier System

Product Features

- Excellent heat dissipation without fans
- Continuous Gain and Slope Control adjustable without signal interruption
- Hot swappable
- RF Signal Level Alarm with Threshold Adjustment
- Input Test Point OR Narrowcast Injection Port
- Power redundancy with any two power sources.
- 5 - 1003 MHz bandwidth
- SNMP monitoring ready
- -20 dB Output Test Point
- Full 24 Month Limited Warranty
