

CableServ® MAG 7MC Amplifier Replacement Module

Product Description

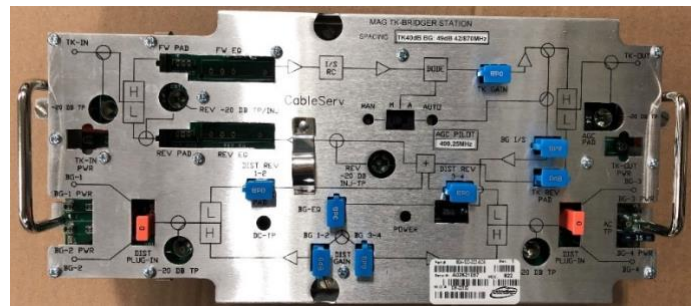

In order to provide cable operators an easy and affordable solution to upgrading legacy modules, CableServ® has designed a new 7MC Station Amplifier Module. Our drop-in amplifier replaces legacy 7MC amplifiers that have limited downstream frequency of 550 MHz. The drop-in amplifier allows for bandwidth upgrades up to 870 MHz without housing or plant alterations. This module comes ready in 3 band-split configurations: 42/54 MHz, 85/105 MHz and 204/258 MHz.

The 7MC Station Amplifier Module provides dual Bridger outputs configurable to 4 Bridger ports, for increased distribution output capability and comes with an attached power supply.

CableServ® offers training assistance to cable systems in the installation and set-up of this replacement module.

Applications

- Magnavox 7MC-2/7MC-6 amplifiers

CableServ 7MC Station Amplifier Module

Product Features

- New amplifier module
- Easy drop-in replacement
- 2-year warranty
