

# CableServ®

## TNA398/T3A/T4A Series

### Mid/High-Split Upgrade

## Product Description

CableServ® has developed a solution for transitioning legacy TNA/T3A series amplifiers to mid-splits/high-splits. This upgrade will expand the upstream bandwidth of existing amplifiers while retaining the amplifier spacing.

This upgrade replaces the main board and reuses existing gain blocks, AGC, chassis, and the power supply. This creates an extremely cost-effective upgrade. The existing downstream operating levels and plug-ins remain the same as well.

By using plug-in style duplex filters on the new main board, systems that choose the mid-split option are able to do future upgrades to high-split by simply installing a high-split kit.

CableServ® offers training assistance to cable systems with the installation and set-up of upgraded modules.

## Applications

- Philips/Magnavox TNA,T3A,T4A series amplifiers
- Expands upstream bandwidth to 85 or 204 MHz

CableServ T3A Mid-Split Upgrade Module

## Product Features

- Plug-in high isolation duplex filters
- Plug-in reverse response correction board
- 2-year warranty

---
