

CableServ® C-Cor FT Series Upgrade to 750MHz with Mid/High-Split

Product Description

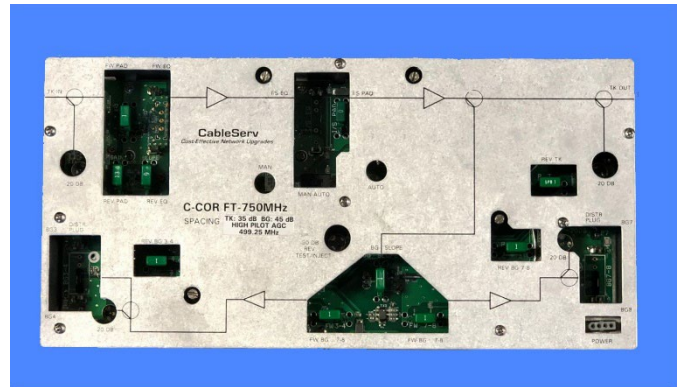

CableServ® provides a cost-effective upgrade from legacy C-COR FT series (450MHz-550MHz) to 750 MHz Downstream and optional Mid/High Split. This solution will reuse the existing housing and retain cable plant spacing, providing a performance 750 MHz 6 port station, without the expensive cut in of a new amplifier.

This upgrade solution consists of new main boards, using SPB-* and SEQ-* accessories. The new Gain Block performance exceeds that of legacy amplifiers.

CableServ® offers training assistance to cable systems in the installation and set-up of this upgraded module.

Applications

- C-Cor FT series of amplifiers

CableServ C-Cor FT Series to 750 MHz and Mid-Split/High-Split

Product Features

- Easy Setup
- High isolation duplex filters
- Built-in Reverse Padded EQ
